The Wild Parrots of Telegraph Hill is the inspiring story of how one man found his life's work--and true love--among a gang of wild parrots roosting in one of America's most picturesque urban settings. Mark Bittner was down on his luck. He'd gone to San Francisco at the age of twenty-one to take a stab at a music career, but he hadn't had much success. After many years as an odd-jobber in the area, he accepted work as a housekeeper for an elderly woman. The gig came with a rent-free studio apartment on the city's famed Telegraph Hill, which had somehow become home to a flock of brilliantly colored wild parrots. In this unforgettable story, Bittner recounts how he became fascinated by the birds and made up his mind to get to know them and gain their trust. He succeeds to such a degree that he becomes the local wild parrot expert and a tourist attraction. People can't help gawking at the man who, during daily feedings, stands with parrots perched along both arms and atop his head. When a documentary filmmaker comes along to capture the phenomenon on film, the story takes a surprising turn, and Bittner's life truly takes flight.

The African Grey can acquire a larger vocabulary than most other parrot varieties--but with or without speech, it's a favorite companion among bird lovers. Here is detailed advice on nutritious feeding, caging, grooming, disease prevention, and much more. Titles in Barron's popular Pet Handbooks series instruct pet owners on health care, feeding and housing, and other facts important to owners and their pets.

On September 6, 2007, an African Grey parrot named Alex died prematurely at age thirty-one. His last words to his owner, Irene Pepperberg, were "You be good. I love you." What would normally be a quiet, very private event was, in Alex's case, headline news. Over the thirty years they had worked together, Alex and Irene had become famous--two pioneers who opened an unprecedented window into the hidden yet vast world of animal minds. Alex's brain was the size of a shelled walnut, and when Irene and Alex first met, birds were not believed to possess any potential for language, consciousness, or anything remotely comparable to human intelligence. Yet, over the years, Alex proved many things. He could add. He could sound out words. He understood concepts like bigger, smaller, more, fewer, and none. He was capable of thought and intention. Together, Alex and Irene uncovered a startling reality: We live in a world populated by thinking, conscious creatures. The fame that resulted was extraordinary. Yet there was a side to their relationship that never made the papers. They were emotionally connected to one another. They shared a deep bond far beyond science. Alex missed Irene when she was away. He was jealous when she paid attention to other parrots, or even people. He liked to show her who was boss. He loved to dance. He sometimes became bored by the repetition of his tests, and played jokes on her. Sometimes they sniped at each other. Yet nearly every day, they each said, "I love you." Alex and Irene stayed together through thick and thin--despite sneers from experts, extraordinary financial sacrifices, and a nomadic existence from one university to another. The story of their thirty-year adventure is equally a landmark of scientific achievement and of an unforgettable human-animal bond.
