In my pursuit to find the perfect curriculum, I came across Capsim, a business simulation that allows students to play the roles of the management team of a multi-million- dollar company in a competitive marketplace. Capsim has four or five different simulations.

R&D Decisions, Strategy, Policy and Innovations explores how research and development decisions affect all of us. They are linked inextricably to the performance of firms and of economics as a whole. Their importance means that they are of concern to a large number of practitioners, policy-makers and researchers. This book demonstrates the range of issues and perspectives which R&D can encompass and at the same time brings out the elements which unite them. The papers in this book are organized into three main sections: * Strategy and Organization explores the importance of R&D and of the structures and strategies of individual organizations. The emerging 'core competence paradigm' is especially noted. * Policy and Performance looks at what new thinking on R&D more generally implies for government policy and the performance of industries, regions and economies. * Disclosure and the Market examines issues raised by changing regulations on the disclosure of R&D expenditure.

This open access book is based on "Spationomy - Spatial Exploration of Economic Data", an interdisciplinary and international project in the frame of ERASMUS+ funded by the European Union. The project aims to exchange interdisciplinary knowledge in the fields of economics and geomatics. For the newly introduced courses, interdisciplinary learning materials have been developed by a team of lecturers from four different universities in three countries. In a first study block, students were taught methods from the two main research fields. Afterwards, the knowledge gained had to be applied in a project. For this international project, teams were formed, consisting of one student from each university participating in the project. The achieved results were presented in a summer school a few months later. At this event, more methodological knowledge was imparted to prepare students for a final simulation game about spatial and economic decision making. In a broader sense, the chapters will present the methodological background of the project, give case studies and show how visualisation and the simulation game works. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use.
