Cross-Cultural Aspects of Tourism and Hospitality is the first textbook to offer students, lecturers, researchers and practitioners a comprehensive guide to the influence of culture on service providers as well as on customers, affecting both the supply and the demand sides of the industry – organisational behaviour, and human resource management, and marketing and consumer behaviour. Given the need for delivering superior customer value, understanding different cultures from both demand and supply sides of tourism and hospitality and the impact of culture on these international industries is an essential part of all students' and practitioners' learning and development. This book takes a research-based approach critically reviewing seminal cultural theories and evaluating how these influence employee and customer behaviour in service encounters, marketing, and management processes and activities. Individual chapters cover a diverse range of cultural aspects including intercultural competence and intercultural sensitivity, uncertainty and risk avoidance, context in communication, power distance, indulgence and restraint, time orientation, gender, assertiveness, individualism and collectivism, performance orientation, and humane orientation. This book integrates international case studies throughout to show the application of theory, includes self-test questions, activities, further reading, and a set of PowerPoint slides to accompany each chapter. This will be essential reading for all students, lecturers, researchers and practitioners and future managers in the fields of Tourism and Hospitality.

The study of the relationship between the person and the situation has had a long history in psychology. Many theories of personality are set on an interpersonal stage and many social phenomena are played out differently as the cast of characters change. At times the study of persons and situations has been contentious, however, recent interest in process models of personality and social interaction have focused on the ways people navigate, influence, and are influenced by their social worlds. Personality and Social Behavior contains a series of essays on topics where a transactional analysis of the person and situation has proved most fruitful. Contributions span the personality and social psychology spectrum and include such topics as new units in personality; neuroscience perspectives on interpersonal personality; social and interpersonal frameworks for understanding the self and self-esteem; and personality process analyses of romantic relationships, prejudice, health, and leadership. This volume provides essential reading for researchers with an interest in this core topic in social psychology and may also be used as a text on related upper-level courses.

Based on a foundation of science and empirical observation, engineering research and design has brought science fiction into science fact. The convergence of neuroscience and technology is facilitating the development of therapies that not long ago would have seemed unimaginable, if not impossible. With contributions from pioneers in industry, academia, and clinical medicine, Neuroengineering provides an understanding of the history, physiology and the most promising engineering technologies. The book presents clinical applications of neuromodulation and a detailed review of the science and mechanisms of action underlying deep brain stimulation. Contributions include discussions of seizure control, clinical, surgical, and technological aspects of responsive neurostimulation, and a thorough review of spinal cord stimulation for pain control. The book highlights promising technologies and applications for neural augmentation, brain and computer interfaces, and motor prostheses. It concludes with coverage of the science underlying current neurostimulation techniques and new paradigm-shifting neuromodulation technologies. We are on the cusp of a technological revolution that promises to have more of an impact on human health, disease, and quality of life than any other in recent history. Its impact on medicine and society promises to be as dramatic as that of the development of antibiotics. The transition of neural engineering from basic research to intense commercialization and widespread clinical application and acceptance is just around the corner. Providing in-depth coverage of cutting-edge developments in technology and clinical practice, the book presents detailed descriptions of technologies, science, and clinical results that build a foundation for the future.

Sample Text

This volume collects the research papers presented at the 6th International Conference on Sustainable Automotive Technologies (ICSAT), Gothenburg, 2014. The topical focus lies on latest advances in vehicle technology related to sustainable mobility. ICSAT is the core and state-of-the-art conference in the field of new technologies for transportation. Research contributions from the US, Australia, Europe and Asia illustrate the pivotal role of the conference. The book provides an excellent overview of R&D activities at OEMs as well as in leading universities and laboratories.

The purpose of this text is to promote the delivery of responsible and safe care for patients undergoing diagnostic tests and procedures by providing information to facilitate use of the nursing and medical problem-solving processes. It provides necessary and detailed information and individualized patient assessment, adequate care analysis and planning, appropriate interventions, patient education, and timely evaluation of patient outcomes.

Negotiation is the most important skill anyone in the business world can have today, because people must continually negotiate their jobs, responsibilities, and opportunities. Yet very few people know strategies for maximizing their outcomes in everyday and in more formal business situations. This volume provides a comprehensive overview of this emerging topic through original contributions from leaders in social psychology and negotiation research. All topics covered are core to the understanding of the negotiation process and include: decision-making and judgment, emotion and negotiation, motivation, and game theory.

Details the role that giants have played in the history of humankind. ...style is breezy and accessible...a pleasant browse. --BOOKLIST ...will likely be of interest to the general reader as well as serve as a useful reference tool. Recommended for all collections. --PUBLIC LIBRARY QUARTERLY
