"Carotenoids, Volume 2" is the first book to be devoted entirely to the chemical synthesis of carotenoids. The essential in-depth appreciation of the perspectives, principles and strategies of carotenoid synthesis is provided in the first chapter. Preparation of polyene synthons and carotenoid end groups, and the coupling reactions commonly used for carbon-carbon double bond formation, as well as the application of these methods and synthons for the synthesis of carotenoids, are then described in detail. The commercially important technical syntheses used for the large scale industrial production of carotenoids, and methods for the preparation of isotopically labelled carotenoids, in particular for biological and medical applications, are also covered. Following the practice established in Volume 1A, Worked Examples are presented. These describe in detail reliable and efficient procedures for key reactions and can be used to form the basis of practical exercises for students of organic chemistry. Tables of useful synthons and a list of natural carotenoids that have been prepared by total synthesis are included as appendices.

The Carotenoids book series provides an introduction to the fundamental chemistry, detailed accounts of the basic methods used in carotenoid research, and critical discussions of the biochemistry, functions and applications of carotenoids. Part 1 discusses the fundamental properties on which the biological functions and effects of carotenoids depend. Part 2 describes important natural functions of carotenoids in all kinds of living organisms.

Swim better—and enjoy every lap—with Total Immersion, a guide to improving your swimming from an expert with more than thirty years of experience in the water. Terry Laughlin, the world’s #1 authority on swimming success, has made his unique approach even easier for anyone to master. American hero and explorer Admiral Richard E. Byrd, Jr. tells the story of his first journey through Antarctica and the founding of a series of camps and bases referred to as “Little America.” Over the years, many similar areas were developed as camps and research areas on Byrd’s Antarctic missions, but the founding of “Little America” required great courage and leadership. In awe of the unforgiving landscape, he eagerly met its treacherous challenges. Byrd outlines the blueprint for his first mission to Antarctica and provides a glimpse into the obstacles he and his team overcame at the world’s end. Reissued for today’s readers, Admiral Byrd’s classic explorations by land, air, and sea transport us to the farthest reaches of the globe. As companions on Byrd’s journeys, modern audiences experience the polar landscape through Byrd’s own struggles, doubts, revelations, and triumphs and share the excitement of these timeless adventures.

Genetic erosion is the loss of genetic diversity within a species. It can happen very quickly, due to catastrophic events, or changes in land use leading to habitat loss. But it can also occur more gradually and remain unnoticed for a long time. One of the main causes of genetic erosion is the replacement of local varieties by modern varieties. Other causes include environmental degradation, urbanization, and land clearing through deforestation and brush fires. In order to conserve biodiversity in plants, it is important to targets three independent levels that include ecosystems, species and genes. Genetic diversity is important to a species’ fitness, long-term viability, and ability to adapt to changing environmental conditions. Chapters in this book are written by leading geneticists, molecular biologists and other specialists on relevant topics on genetic erosion and conservation genetic diversity in plants. This divisible set of two volumes deals with a broad spectrum of topics on genetic erosion, and approaches to biodiversity conservation in crop plants and trees. Volume 1 deals with indicators and prevention of genetic erosion, while volume 2 covers genetic diversity and erosion in a number of plants species. These two volumes will also be useful to botanists, biotechnologists, environmentalists, policy makers, conservationists, and NGOs working to manage genetic erosion and biodiversity.
