Tackling central problems in philosophy of religion by referring to relevant theories and findings in cognitive science, anthropology, developmental psychology, decision theory, biology, physics, cosmology, the contributors address a range of topics, including divine attributes; God, creation and evolution; God and the universe; religious beliefs.

The question of whether faith in God is

reasonable is of renewed interest in today's academy. In light of this interest, as well as the rise of militant religion and terrorism and the emergent reaction by neo-atheism, this volume considers this important question from the views of contemporary scientists, philosophers, and in a more novel fashion, of rhetoricians. It is comprised of a public debate between William Lane Craig, supporting the position that faith in God is reasonable and Alex Rosenberg, arguing against that position. Scholars in the aforementioned fields then respond to the debate, representing both theistic and

atheistic positions. The book concludes with rejoinders from Craig and Rosenberg.

This book investigates the debates around religion and science at the influential Victoria Institute. Founded in London in 1865, and largely drawn from the evangelical wing of the Church of England, it had as its prime objective the defence of 'the great truths revealed in Holy Scripture' from 'the opposition of science, falsely so called'. The conflict for them was not between science and religion directly, but what exactly constituted true science. Chapters cover the

Victoria Institute's formation, its heyday in the late nineteenth century, and its decline in the years following the First World War. They show that at stake was more than any particular theory; rather, it was an entire worldview, combining theology, epistemology, and philosophy of science. Therefore, instead of simply offering a survey of religious responses to evolutionary theory, this study demonstrates the complex relationship between science, evangelical religion, and society in the years after Darwin's Origin of Species. It also offers some insight as to why conservative evangelicals did not display the

militancy of some American fundamentalists with whom they shared so many of their intellectual commitments. Filling in a significant gap in the literature around modern attitudes to religion and science, this book will be of keen interest to scholars of Religious Studies, the History of Religion, and Science and Religion.

this idea of the Absolute, the idea of the One, out of which everything in the universe has evolved. The last word of Advaita is Tattvamasi, - That thou art." These are the words of the author of the present volume, at the end of the book. It is a clear and concise statement of the daring claim made by the sages of India, from very old times, that they have attained to such unity in the religious field and succeeded in bringing religion to the rank of a perfect and complete science. The methods adopted by them to come to this result, were the same as followed by all the sciences of the present

day, viz., observation and analysis of the facts of our experience, and a synthetical combination of the results obtained, to find out the same facts. That Kapila, Vyasa, Patanjali and indeed all the philosophers of India, including most of the Vedic seers, applied these methods in coming to their respective discoveries - has been fully discussed by the author in his books on the different Yogas. theology, which seeks to gain knowledge of the divine by relying on reason and experience of the world. Arguments in natural theology rely largely on intuitions and inferences that seem natural to us, occurring spontaneously -- at the sight of a beautiful landscape, perhaps, or in wonderment at the complexity of the cosmos -- even to a nonphilosopher. In this book, Helen De Cruz and Johan De Smedt examine the cognitive origins of arguments in natural theology. They find that although natural theological arguments can be very sophisticated, they are rooted in everyday intuitions about purpose,

causation, agency, and morality. Using evidence and theories from disciplines including the cognitive science of religion, evolutionary ethics, evolutionary aesthetics, and the cognitive science of testimony, they show that these intuitions emerge early in development and are a stable part of human cognition. De Cruz and De Smedt analyze the cognitive underpinnings of five well-known arguments for the existence of God: the argument from design, the cosmological argument, the moral argument, the argument from beauty, and the argument from miracles. Finally, they consider whether the cognitive

This is the definitive study of John Dee and his intellectual career. Originally published in 1988, this interpretation is far more detailed than any that came before and is an authoritative account for anyone interested in the history, literature and scientific developments of the Renaissance, or the occult. John Dee has fascinated successive generations. Mathematician, scientist, astrologer and magus at the court of Elizabeth I, he still provokes controversy.

To some he is the genius whose contributions to navigation made possible the feats of Elizabethan explorers and colonists, to others an alchemist and charlatan. Thoroughly examining Dee's natural philosophy, this book provides a balanced evaluation of his place, and the role of the occult, in sixteenth-century intellectual history. It brings together insights from a study of Dee's writings, the available biographical material, and his sources as reflected in his extensive library and, more importantly, numerous surviving annotated volumes from it.

How much faith should we place in what scientists tell us? Is it possible for scientific knowledge to be fully "objective?" What, really, can be defined as science? In the second edition of this Very Short Introduction, Samir Okasha explores the main themes and theories of contemporary philosophy of science, and investigates fascinating, challenging questions such as these. Starting at the very beginning, with a concise overview of the history of science, Okasha examines the nature of fundamental

practices such as reasoning, causation, and explanation. Looking at scientific revolutions and the issue of scientific change, he asks whether there is a discernible pattern to the way scientific ideas change over time, and discusses realist versus anti-realist attitudes towards science. He finishes by considering science today, and the social and ethical philosophical questions surrounding modern science.
