World Flows Migrations And Exchanges

This dissertation explores the

relationship between types of livestock and place in the context of Great Britain's expanding agro-pastoral empire.

Specifically, it examines how the distribution and circulation of breeds

Access PDF The Herds Shot

of livestock native to the British Isles influenced understandings of kind and location-of the dynamic interaction between heredity, human influence and environmental conditions, and their various fluid effects on ovine and bovine diversity. Drawing on

Access PDF The Herds Shot

extensive archival work in the United Kingdom, New Zealand, and Australia, I trace both the national origins and imperial expansion of British breeds. As Britain industrialized in the early nineteenth century, breeders faced the need to convert the specificity

standardization, transforming regional types of cattle and sheep into geographically transposable, bulky, and quick-fattening beasts suited for increasingly sophisticated economies and industrialized production. Tension between

Access PDF The Herds Shot

standardization and specialization shaped the dispersal of breeds throughout the empire as well. Here, stockbreeders served two masters: the unfamiliar climates and topographies of Australia, New Zealand, and North America, which demanded local adaptations, and the

British consumer, whose dinner table was the end of the line for the bulk of colonial beef and mutton. As they tried to balance local adaptation and metropolitan taste, breeders experimented with heredity, testing the limits of contemporary understandings of

heritability and breed plasticity, and developed of new strains of livestock genetically derived from British breeds, but culturally, economically and environmentally hybrid. In the process, imperialism itself was instantiated in these animals. Bodies of sheep and cattle were

remade to suit new lands and later to fill the refrigerated holds of ocean liners. The empire itself was recast as a vast apparatus for feeding Britons. This system, divested of its imperial trappings and disseminated still further, brings meat to tables around the world today.
